

# SpillEx

Absorb spills quickly!

# SpillEx

– the problem solver

Spills on hard floors can cause considerable problems.

In cleanrooms and controlled environments, spills create slip hazards and are not easily removed. Spills usually require a bulky mop system or a large number of expensive wipes that may not absorb well. In Lab Animal Research facilities, animal urine on floors and benches require fast and sanitary removal.

Not to worry. There is a solution to spill problems – SpillEx from Vileda Professional.

## Why traditional floor cleaning doesn't work

When laundering microfiber mops that have been used to remove spills, you bring the contaminated mop in contact with up to 50 other mops. Not an ideal situation, even if you do a disinfection laundering process.

Similar problems occur when using a bucket and wringer. When dipping the used mop into the bucket, it will contaminate the clean water after the first rinse.

## SpillEx takes care of the problem

SpillEx is a disposable, super-absorbing floor cloth that takes care of liquid spillages in minutes. One SpillEx absorbs and holds up to 1,200 ml of water and up to 500 ml of NaCl 0.9% (similar to urine) and it will not drip when lifting and moving, as SpillEx transforms the liquid spill into a gel.

SpillEx has a very low particle count. When tested against leading competitive products, SpillEx shows the lowest particle burden of items tested.

SpillEx is the ideal solution for when a spill occurs before the actual floor cleaning takes place. There is no risk of cross-contamination and no risk of soiling the bucket water with the spillage.

Available in three different options to satisfy any cleaning need. SpillEx, Cleanroom SpillEx and Cleanroom SpillEx-Gamma Irradiated. Cleanroom SpillEx versions are vacuum sealed in a poly double bag with easy open notch, extra strong film and gamma irradiated version has a gamma processed indicator dot.

## Easy as 1-2-3

1. Place SpillEx on the spill with the absorbent unprinted side down.
2. Wait until the spill is completely soaked up by SpillEx.  
If the spill area is bigger than the SpillEx, simply move and cover the remaining spill area.
3. Pick up the used SpillEx and dispose of it.

Case Code	Description	Size	Pcs/pack	Packs/carton
146760	SpillEx	20 x 14 in	20	10
150738	Cleanroom SpillEx	20 x 14 in	10	10
150739	Cleanroom SpillEx- Gamma Irradiated	20 x 14 in	1	50
